

AQUALYTE - AUSTRALIAN-MADE HIGH PERFORMANCE HYDRATION TO ASSIST IN RECOVERY

AQUALYTE Thursday, March 24th, 2022

Support your immune system and stay hydrated with AQUALYTE - the fastest way to boost your body's electrolytes and stay hydrated when recovering from COVID-19.

We've all heard that keeping your immune system healthy and functioning at its best is the most important way you can prepare to fight any virus. And, when it comes to COVID-19, the message is the same. With COVID-19 now actively circulating throughout the community in Western Australia, there are ways we can prepare at home in the event you or your family need to rest and recover from an infection.

The WA Government has released a series of helpful guidelines for households to help them prepare for an infection in the home; these include having a supply of pain-relief medications and electrolyte boosting drinks, such as AQUALYTE.

Proudly West Australian owned and operated, AQUALYTE is a low sugar, hypotonic fluid and electrolyte replacement solution available now at pharmacies state-wide. Unlike sports drinks, which carry few electrolytes and focus on energy, AQUALYTE's top priority is hydration. So, when you're suffering from symptoms like fever, coughing, diarrhoea and vomiting, you can be sure that you are getting efficient fluid absorption to restore your body and assist in recovery.

Suitable for all ages, AQUALYTE is a cost effective, pleasant-tasting and local alternative to others on the market, including pre-mixed varieties. Locally manufactured in WA, simply add water to a single sachet when required. If you do want to make a large quantity, once mixed our fluid-replacement solution can be stored for up to two weeks in the fridge, making it incredibly convenient.

Hydration and nutrition play an important role in your body's response and recovery to infection. Electrolytes are essential minerals that your body needs to function correctly. When you lose electrolytes through fever, coughing, vomiting or diarrhoea, fluids aren't absorbed efficiently. By restoring these with formulated oral solutions such as AQUALYTE, you can be sure that you are receiving proper rehydration to aid your recovery.

Support local business and save money by choosing Aqualyte.

Contact Profile

AQUALYTE

Developed after years of our research investigating the effects of dehydration on health and performance, the low sugar, rapid absorption and scientifically balanced electrolyte replacement makes Aqualyte an effective rehydration solution for the prevention of dehydration and heat stress thereby contributing to workplace safety and sports performance.
