

Super Critical Fluid Extraction

Some techniques for extracting Hemp use high heat and/or toxic solvents which are dangerous, unsustainable and don't extract the full complement of nutrients from the plant. Even worse, they cannot always be fully separated from the end product which is therefore not clean or pure.

Super Critical Fluid extraction is a safe, sustainable and superior method. Using state of the art equipment we take harmless Carbon Dioxide (CO2) and compress it to upwards of 10,000psi (300 times greater than car tire pressure).

At these extremes CO2 becomes 'super critical' where it possesses the properties of both a liquid and a gas at the same time. It is also very cold so it does not harm any heat-sensitive nutrients like enzymes or vitamins.

This super critical fluid is an exceptional non-toxic solvent. When added to our nutrient rich Hemp it fully liberates the entire treasure of phytonutrients hidden within. The CO2 is then released and recycled leaving a highly concentrated, totally pure extract that is more easily digested and assimilated.

FAQ

Is Elixinol™ the same as 'Medical Marijuana'?

No - though the Industrial Hemp used to produce Elixinol™ is a special variety of Cannabis Sativa - a relative of Marijuana - it does not contain the psychoactive properties of THC as Marijuana does and as such is not limited to serving sizes of 10-30mg which makes Industrial Hemp a much more practical source of Cannabinoids.

Is CBD Hemp Oil legal?

Yes - unlike Medical Marijuana you do not require a special permit to buy Elixinol™ CBD Hemp Oil. It is imported into the USA under approved tariff codes as a dietary supplement and can be purchased online and shipped to your home anywhere in USA and other approved countries.

Will I get 'high' if I consume CBD Hemp Oil?

No - Elixinol™ is made entirely and only from Industrial Hemp and does not contain the psychoactive properties of THC. Additionally CBD has the property of being anti-psychoactive.

Do you use Hemp plants from China?

No - all of our Hemp is organically grown and processed in choice locations of Northern Europe before being sent directly to USA and other approved countries.

Can Elixinol™ be purchased in bulk for a fitness club, nursing home, health retreat and/or to resell it?

Yes - bulk orders of Elixinol™ are permitted. Certain criteria exist to qualify as a distributor who can on-sell Elixinol™. Contact us via our website to find out what those criteria are and see if you qualify. We look forward to all enquiries.

What are Hemp Cannabinoids?

From the dawn of mankind, man has highly revered and greatly benefited from Hemp as a source of nutrition and medicine. The greatest physicians from ancient China, India, Egypt, Assyria, Persia, Greece and Rome have stated that Hemp is an indispensable health treasure beyond compare.

Modern science has identified over 400 phytonutrients in various parts of the plant from the seeds right through to the roots. These include hundreds of **Terpenoids**, **Essential Oils** and **Antioxidants** but perhaps the most dynamic are a group of 80 compounds called **Cannabinoids** that are exclusively found in Hemp and one other place; our bodies.

We were designed with a built-in **Endocannabinoid System** (ECS). It is your body's way of communicating with itself and properly regulating the way every other body system functions from your brain to your little toe. Like other nutrients in our diet, Cannabinoids can become depleted and in need of regular dietary replenishment.

In 4000 years there is no evidence of anyone dying from consuming any part of the Hemp plant. Indeed, though Hemp has been persecuted and *falsely* labelled as harmful, modern scientists and government reports^{^*} consistently conclude that Hemp is among the **safest and most beneficial things we can and should consume.**

* US Government Patent #6,630,507 "Cannabinoids as Antioxidants & Neuroprotectants."

CBD is good for me™

CBD is short for Cannabidiol which by all scientific accounts appears to be the **ROCKSTAR** of the Cannabinoid world.

It is the most predominant Cannabinoid in Hemp and is endowed with many beneficial properties.

In its patent [#6,630,507] titled CANNABINOIDS AS ANTIOXIDANTS AND NEUROPROTECTANTS[^] the US Government makes many impressive claims about CBD including the following: **"Cannabidiol (CBD), a naturally-occurring constituent of the industrial hemp plant, promotes and supports the nutritional health of aging bodies."**

One of the properties of CBD is that it is **anti-psychoactive** which means that unlike THC, the Cannabinoid found abundantly in Marijuana, CBD is not psychoactive and may be consumed safely as a dietary supplement.

It simply is not possible to get "high" or intoxicated by consuming Industrial Hemp food products. It is safe for the whole family.

Elixinol™ The best CBD choice

Elixinol™ is a Hemp Oil derived from specially bred Industrial Hemp plants with a high CBD content. The resultant oil is 18% CBD (slight seasonal variations may occur). It is a wholesome extract, not synthetic and not an isolate. It contains all the synergistic Cannabinoids, Terpenoids, Essential Oils and other compounds of the original plant.

A 10ml tube of Elixinol™ contains 1,800mg of CBD. As a dietary supplement, a suggested serving is ½ml taken under the tongue twice daily which will provide many valuable nutrients including 180mg of CBD.

The best plants grown the best way in the best locations

CBD may sound like something new but it's not new to us. Perfecting the craft of growing Industrial Hemp has been at the heart of our farmer's family for close to **300 years**; passed down from father to son over the centuries.

To consistently produce the most nutritious, most synergistic Cannabinoid-rich oils, our plants are organically grown at a specific latitude in specially chosen locations of **Northern Europe**. Only the finest plants are then chosen for extraction. Trust Elixinol™ for your family and live well.
